

WILL AI REPLACE ME?

Legal Secretary

Business Support

While legal secretaries play a pivotal role in law firms, a substantial portion of their responsibilities, including tasks like drafting, formatting, and appointment scheduling, could potentially be automated by AI. This leads us to believe that substantial productivity improvements can be attained within this profession.

Automation degree: 66.67%

Strong impact of AI on this Position

Main tasks

This section reviews the 3 main tasks associated with the job studied and assesses the potential level of automation induced by AI (« **AI Automation Impact** »). The modeling uses 8 criteria detailed on the « **Methodology** » page.

Tasks	AI Automation Impact
Draft and format legal documents	High
Organize appointments and manage administrative follow-up of cases	High
Assist legal professionals in their tasks	High

Impact on skills

At-risk Skills ↓

Enter digital documents	This skill may be at risk due to the evolution of automated typing and text processing technologies. More and more tools offer functions such as auto-fill, voice transcription, and automated correction.
Manage mail administration	With the increasing digitization of documents and the growing use of electronic communication, traditional physical mail management might become less relevant

Future-proof Skills ↑

Direct people according to their request	Even though we live in the digital age, the ability to guide and advise clients or colleagues remains vital. This skill requires a deep understanding of individual needs, something technology can't easily replace.
Interpersonal Communication and Relationship Management	Legal secretaries play a crucial role as the contact points between lawyers, clients, courts, and other stakeholders. They often need to explain legal processes, collect sensitive information, and maintain clear and open communication. This skill requires empathy, understanding, and the ability to navigate often stressful or emotionally charged situations. The human interaction and ability to understand and respond to emotional nuances and individual needs is something AI cannot replicate. Furthermore, distilling complex information into simple, understandable terms for clients requires a deep understanding of the matters at hand and excellent communication skills
