

WILL AI REPLACE ME?

Product Owner

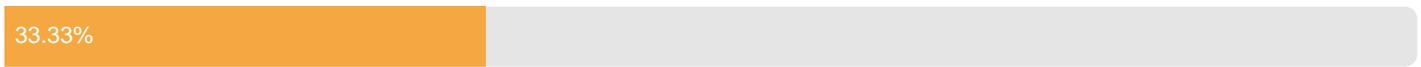

Information Technology, Telecommunications, and Security

The Product Owner, a pivotal figure within agile teams, may potentially benefit from certain AI contributions, particularly in the area of feature prioritization.

However, their role, which is primarily rooted in communication, collaboration, and stakeholder alignment, constrains the direct impact of automation. Given that human interaction forms the core of their responsibilities, any gains in productivity through AI are likely to be marginal.

Automation degree: 33.33%

Moderate but identified automation impact of AI for this Job

Main tasks

This section reviews the 3 main tasks associated with the job studied and assesses the potential level of automation induced by AI (« **AI Automation Impact** »). The modeling uses 8 criteria detailed on the « **Methodology** » page.

Tasks	AI Automation Impact
Define and prioritize product features in collaboration with stakeholders	Low
Work closely with the development team to ensure feature realization	Moderate
Serve as a liaison between technical teams and stakeholders to align expectations and deliverables	Moderate

Impact on skills

At-risk Skills ↓	
Draft a specification	With the increasing adoption of agile methodologies, the traditional need for detailed specifications has decreased. Instead, « user stories, » epics, and other agile elements are used to define requirements.
Procedures for creating a test plan (steps, scenarios...)	Automation of testing and Test-Driven Development (TDD) might change the way tests are designed and executed.
Future-proof Skills ↑	
Identify the sponsor's needs	The ability to effectively interact with stakeholders and understand their needs is fundamental to the Product Owner role. This relational and listening skill is hard to automate.
Steer a project	Directing and managing a project requires leadership, communication, and decision-making skills that are vital for a project's success and are not easily automatable.
